---	---------------------------------------	----------------------------------	---------------------------------	------------------------------------

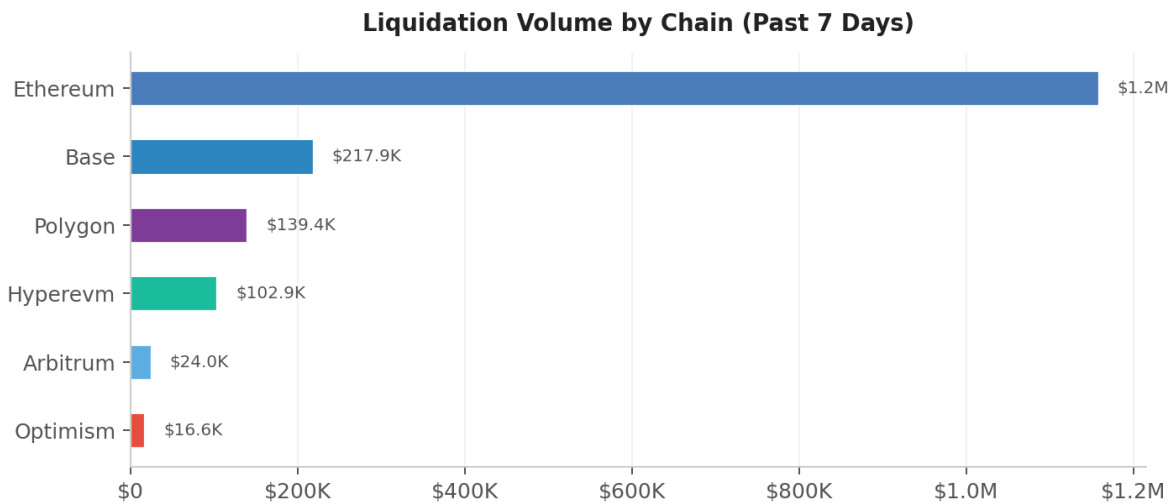

TLDR

Over the past 7 days, Morpho processed **\$2.8M** in liquidations across **1,247** positions and **89** markets on **11** networks—with **zero realized bad debt**.

1. Liquidations & Bad Debt

Morpho's infrastructure processed \$2.8M in liquidations over the past week. Liquidation activity spanned 11 chains and 89 distinct markets.

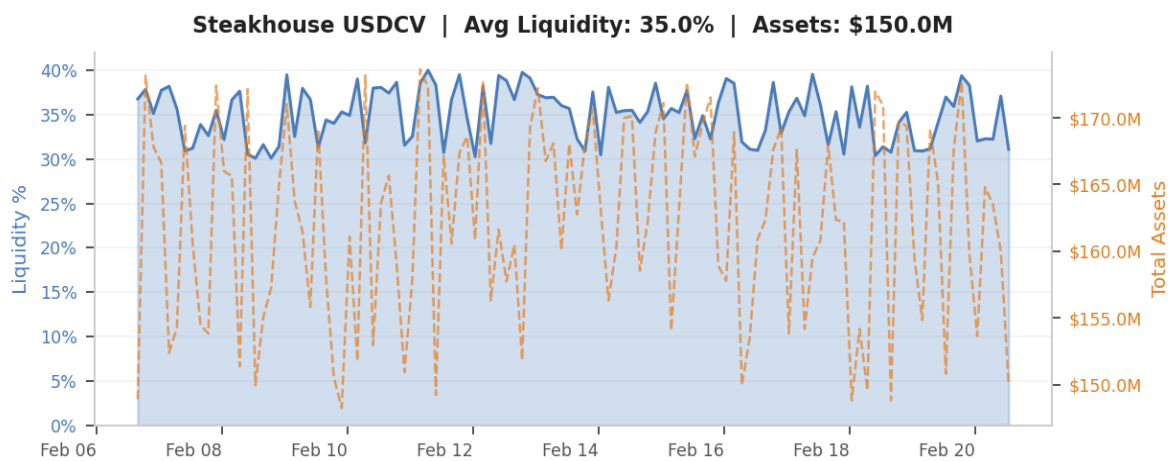

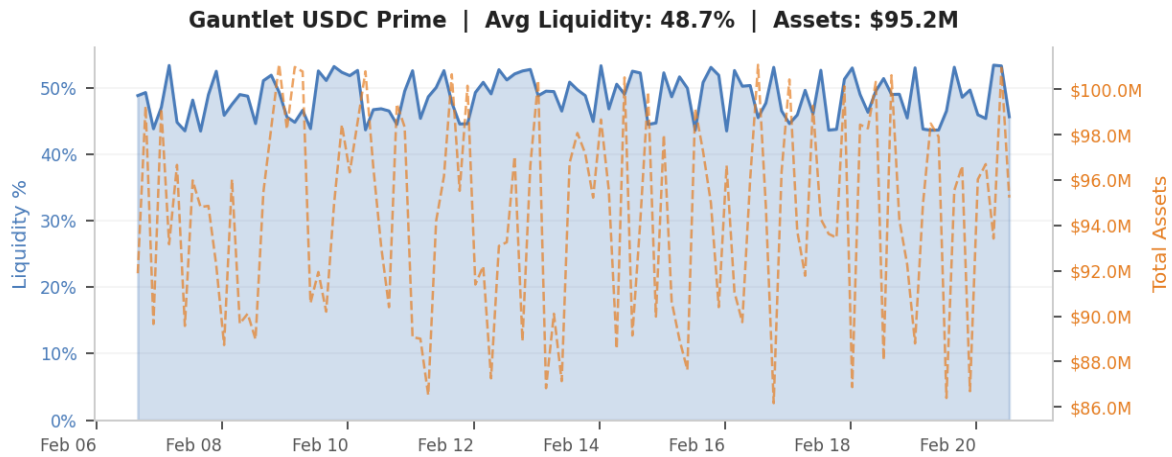

Liquidation Breakdown by Chain

Chain	Volume	Positions	Markets
Ethereum	\$1.2M	496	31
Base	\$217.9K	52	28
Polygon	\$139.4K	358	16
Hyperevm	\$102.9K	541	39
Arbitrum	\$24.0K	566	16
Optimism	\$16.6K	562	22

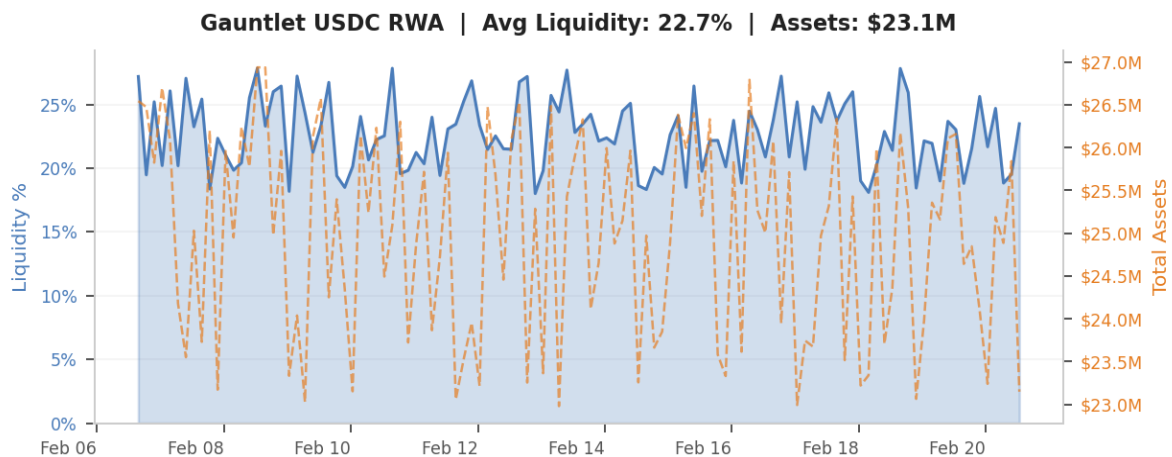

2. Vault Liquidity

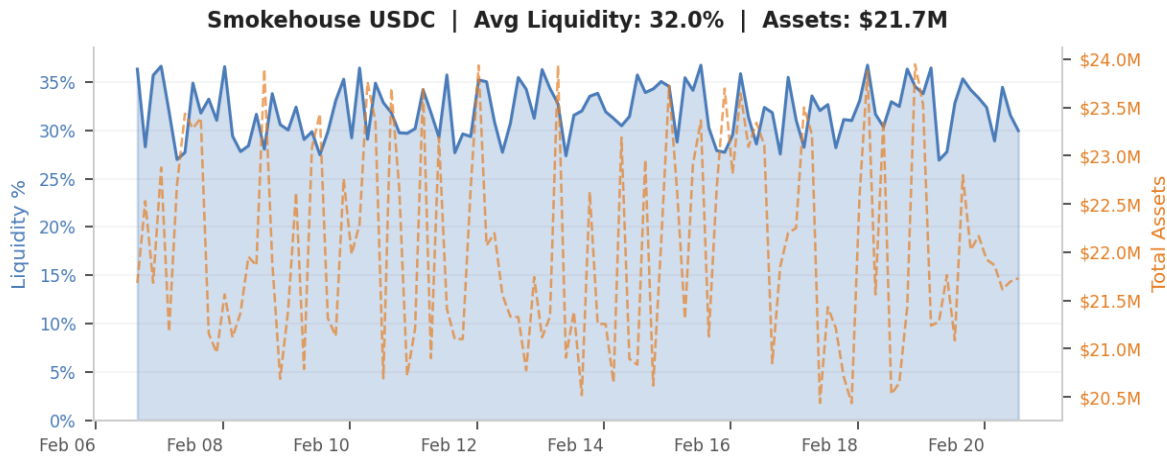

Vault liquidity measures the percentage of deposited assets that remain available for withdrawal. Higher liquidity indicates healthier vault conditions and sufficient buffer for lender withdrawals even during periods of market stress.

Bluechip Vaults — Conservative risk profile, high liquidity expected

Long-Tail Vaults — Higher yield, relatively more risk exposure

3. Bad Debt Overview

No realized bad debt events occurred during the past 7 days, confirming the effectiveness of Morpho’s liquidation mechanisms and the prudent risk parameters set by curators across the network.

Top Unrealized Bad Debt Positions

\$0

Realized Bad Debt
(Past 7 Days)

Market	Chain	Unrealized Debt
deUSD/USDC(86.0%)	ethereum	\$5.8K
UNKNOWN/iviUSD(91.5%)	ethereum	\$5.3K
wbCOIN/USDC(86.0%)	base	\$3.6K

4. Key Takeaways

- 1. **Infrastructure performed as designed.** Morpho processed \$2.8M in liquidations across 1,247 positions and 89 markets on 11 networks.
- 2. **Protocol resilience confirmed.** Liquidation mechanisms functioned smoothly across all chains, demonstrating the robustness of Morpho’s decentralized architecture.
- 3. **Curator risk management effective.** Market parameters set by curators ensured timely liquidations and prevented losses to lenders across the network.
- 4. **Vault liquidity remained healthy.** Both bluechip and long-tail vaults maintained sufficient available liquidity, demonstrating that Morpho Vaults can sustain large withdrawals even during volatile periods.
